II CONGRESS
Food Safety - Risk Management in the Supply Chain
15-17 of March, 2015 r.
The Cristal Hall, Warsaw University of Life Sciences
Warsaw, 166 Nowoursynowska Str.
Ladies and Gentlemen,

There are major changes in the organization of regional, national and international food supply chains and networks. Global dependencies and relationships in one of the largest economic sectors are of great importance for the basic needs of humans and their behavior in a variety of cultural, social, economic and legal environments. They are a challenge for research and scientific cooperation.

To meet the diverse challenges that lie ahead, unilateral approach focused on classical studies is no longer sufficient. One requires a multidisciplinary approach that combines economic, social and legal aspects, as well as the discipline of technical, environmental and natural sciences.

The Congress „Food Safety - Risk Management in The Supply Chain”, organized by Department of Economics and Organization of Enterprises, Faculty of Economic Sciences, WULS, the Cluster of Innovation in Agribusiness and Office of Quality promotion in cooperation with the International Center for Food Chain and Network Research (FoodNet Center Bonn) at the University of Bonn, in close collaboration with interdisciplinary enterprises, provides a platform for the exchange of knowledge and experience in the field of food safety, new technologies, market access, global logistics, relationships and cooperation between multinational and small producers, public and private standards and sustainable development.

The congress is aimed at representatives of science, official food control, food producers and processors.

prof. dr hab. Henryk Runowski
Head of Department of Economics
President of Quality Promotion Office
and Organization of Enterprises

Tadeusz Wojciechowski
President of Quality Promotion Office
Food Safety - Risk Management in the Supply Chain
